User Story Description

As a Generalist SME

I want to Reset Password

So that if I've forgotten it or I want to change it, I can

Acceptance Criteria

1. The user is able to view reset password option on the log-in page
2. The user is able to direct to steps to reset password
3. The user is able to enter information to verify identity
4. The user is able to reset password
5. The user is able to go back to the log in once finished resetting the password

☐ password reset methods need confirmation (what verification info need to be provided?)

☐ password security standard need to be defined

Assumptions:

1. Password security rules will be follow what already exists on Okta

Specs by Example & Business Rules

#	Given	When	Then	Business Rules
1	The user is on log in page	The user clicks on reset password CTA	The user is directed to password reset flow	
2	The user is on the password reset page	The user enter verification info correctly	The user is able to reset password and save	
3	The user is on the password reset page	The user enter verification info wrongly	The user is not able to reset password	<input type="checkbox"/> rules need to be defined (ie: how many times they can try)

Dependencies

Same as VCOO-163.

Confirm that:

1. Okta or Fabric will manage the password compliance

Assumption: logic should not be managed in Visualizer/Fabric (security and maintenance purposes)
